Feedback

Feedback assignment 3 John Busker

General

The Markdown Document looks very clean overall. There's just a big amount of plots which could be kinda confusing. A solution for this is in Assignment 2.

Assignment 1

Assignment 1 looks good. for the median question, the explanation could be better. It mostly describes what a median is. Instead of why it's used. The plots are well explained, and look good with a nice little legend. The only thing that's missing in the last question is the last two plots.

Assignment 2

The first question needs to have a change in the D parameter. The question says that the drug shouldn't have influence on the synthesis of the receptor. There's still other parameters which influence it.

The plots in question two look good, but could maybe have a line in the middle to show where the medicine is stopped.

Question three involves a lot of plots. A better way to compare the different results would be having them in on plot. This would show the difference very clearly.

The third question's plot doesn't really show what you have changed to get this result. It only describes the plot itself.

For the last question there's the same thing. The 4 plots could be one with multiple lines. Which would lead to a cleaner plot.
